

Radislav Golubtsov

OBJECTIVE

To obtain the position of a Software Developer / Senior Software Developer

An IT multilinguist

SUMMARY

Total IT experience – 19 years

Hardware

- Intel x86 (i686 / x86-64)
- HP PA-RISC
- IBM PowerPC
- Sun SPARCstation

Operating Systems

Unices and derivatives (OpenBSD, FreeBSD, Arch Linux, Debian GNU/Linux, Ubuntu, Fedora, CentOS, Red Hat Enterprise Linux, Mac OS X, HP-UX, IBM AIX, Sun Solaris). Microsoft Windows

Programming Languages

C, Go, Java, Perl 5, Python 2/3, Bash Shell Script, JavaScript (ES5-6/Node.js), GNOME Vala/Genie, Lua, C++, Objective-C 2.0, Fortran 95, Erlang, Elixir, LFE (Lisp Flavoured Erlang), Clojure

Technologies

- Python and related modules, libraries, and frameworks (Python Standard Library, Twisted Web, Klein, Falcon, Flask, Celery, Django REST framework, ReportLab PDF Toolkit, etc.)
- Linux kernel API, Linux kernel modules (block device driver)
- Perl and related modules, libraries, and frameworks (DBI, CGI, LWP, Mojolicious, Text::Xslate, Asterisk::AGI, Net::DNS::Native, IO::Select, etc.)
- IVR (Interactive Voice Response) using Asterisk VoIP PBX
- GNU libmicrohttpd (C library to make a lightweight multi-threaded HTTP server), GNU C Library (glibc), GNU C++ Library (libstdc++), GNOME libsoup
- GTFS Realtime (General Transit Feed Specification), Google Text-To-Speech API
- Java SE / EE, Java Servlet, JavaServer Pages (JSP), JSP Standard Tag Library (JSTL), Java Portlet, Vaadin Framework, Spring Web MVC / Spring Security, Play! Framework, Apache Struts / Struts 2, JavaServer Faces (JSF), Java Database Connectivity (JDBC), JavaMail, Java Abstract Window Toolkit (AWT), Java Swing, iText (Java-PDF Library), jQuery (JavaScript Library), Node.js / Luvit, Harpjs.com, HTML, CSS, XML, YAML, JSON, SQL, GNUstep / Cocoa API, Eclipse Standard Widget Toolkit (SWT), HTTP(S), (S)FTP, SSH, SCP, RESTful microservices, etc.
- Erlang/OTP, ERTS (Erlang Run-Time System), Erlang Standard Library
- Elixir, Elixir Standard Library, Cowboy (web server library for Erlang/OTP)
- LFE (Lisp Flavoured Erlang) – Lisp-2 dialect for Erlang VM
- Clojure – Lisp-1 dialect for JVM, Clojure Standard Library, HTTP Kit (HTTP client/server library for Clojure)

Development Tools	<ul style="list-style-type: none"> ● Vim / vi, Oracle JDeveloper, Eclipse Platform (Eclipse SDK), MyEclipse Blue Edition, IBM Rational Software Architect (RSA), IBM Rational Application Developer (RAD), IBM WebSphere Studio Application Developer (WSAD) ● GNU Bash, GNU Screen, GNU Toolchain: GNU Make, GNU Compiler Collection (GCC): gcc, g++, gcc-objc, gfortran; GNU Binutils, GNU Debugger (GDB), GNUstep, sed, etc. Clang (C / C++ / Objective-C LLVM compiler front-end), TCC (Fabrice Bellard's Tiny C Compiler) ● Erlang Rebar, Apache Maven, Apache Ant
DBMS	PostgreSQL, MySQL, Oracle Database, IBM DB2 Universal Database, SQLite, Redis
Application / Web Servers	<ul style="list-style-type: none"> ● Node.js, Luvit (Lua) ● uWSGI (Python/WSGI, Perl/PSGI), Gunicorn (Python/WSGI), Twisted Reactor ● Perl-based application servers: Twiggy, Hypnotoad, Morbo ● Apache Tomcat, JBoss Application Server, IBM WebSphere Application Server, IBM WebSphere Portal Server, Apache Pluto ● Cowboy (HTTP server for Erlang/OTP) ● HTTP Kit (HTTP server for Clojure) ● Apache HTTP Server, Nginx
Middleware / Misc. Apps	Git, GitHub, GitLab, Bitbucket, Perforce, Subversion (SVN), Concurrent Versions System (CVS), IBM Directory Server (LDAP), JIRA, Redmine, Trac, Trello, MediaWiki, Doxygen, Travis CI and Jenkins (continuous integration services), Docker (software containers infrastructure), Koding (cloud-based dev env + VM), Samba

Languages	
English	Full Professional Proficiency: <ul style="list-style-type: none"> ● Reading / writing freely ● Able to perform business correspondence at a polite level ● Speaking at upper intermediate level
Russian	Native or Bilingual Proficiency

Education (in reverse order)	
May 2002 – Jul 2003	Ph.D. student of the School for Advanced Studies, Pavel Sukhoi Gomel State Technical University
Oct 2001 – May 2002	Master student of the Abdus Salam International Centre for Theoretical Physics, Trieste, Italy
Nov 1999 – Oct 2001	Postgraduate of the Pavel Sukhoi Gomel State Technical University (Ph.D. student of the School for Advanced Studies)
1994 – 1999	Student of the Pavel Sukhoi Gomel State Technical University, Gomel, Belarus ("Diploma in Honor")

Work experience (in reverse order)	
Nov 2019 – Jan 2020, Development work at Success Craft, LLC (Gomel branch), Gomel (3 months)	
Job position: Salesforce Developer of the Software Development Department	
Nov 2019 – Jan 2020	<p>Flosum ALM: Application Lifecycle Management Solution</p> <p>Project description: Continuous development of the application lifecycle management solution (Flosum), built on the Salesforce platform, and the Dataplier app – a data migrator, metadata-driven Salesforce app, aimed at transferring arbitrary data between Salesforce orgs.</p> <p><i>(The customer of the project is Flosum, Inc.)</i></p> <p>Personal role in the project: Testing the workability and documenting the whole process of migrating data, based on the Knowledge Article objects, using the Dataplier app. Creating the Customers Community prototype, a Salesforce community, and making initial development on its main page, including applying the design and partial content to it, taken from the Zendesk support website, dedicated to Flosum. Enabling, activating, and initially populating the knowledge base, targeting the Customers Community. Training the Flosum customers enablement management representative (by recording a series of screen videos) how to create knowledge articles and close cases using those knowledge articles. Other activities include bug fixing in backend components of the Flosum app and improving their developer documentation.</p> <p>Tools and technologies used:</p> <p>Dev OS: Arch Linux, Ubuntu Server amd64 (VM: QEMU-KVM) – solely to run web browsers and local HTML/CSS-based prototyping tasks Salesforce Developer Edition, Salesforce Enterprise Edition (CRM in the Cloud) Apex, Lightning Aura Components, HTML, CSS, JavaScript Salesforce Developer Console, Vim Git, JIRA</p>
Nov 2017 – Mar 2019, Development work at Exadel, Inc. (Gomel branch), Gomel (1 year, 5 months)	
Job position: Software Developer of the Software Development Department 2	
Nov 2018 – Mar 2019	<p>Barracuda WSG Azure Orchestration Blueprint</p> <p>Project description: Development of the Flask Blueprint-based application component, so-called Orchestrator, inside the Barracuda Web Security Gateway (WSG) proxy server backend which is intended to integrate WSG with the Microsoft Azure cloud platform to automate creating virtual infrastructure appliances by invoking the Terraform tool (along with the given infrastructure configuration) running in a Celery task queue. WSG as well as Orchestrator both are written in Python, and the latter uses the Celery task queue library to asynchronously execute Terraform jobs.</p> <p><i>(The customer of the project is Barracuda Networks, Inc.)</i></p> <p>Personal role in the project: Development and configuration activities in the part of handling and validating Terraform data (configuration variables) and passing them to a Celery task queue for further execution. Also taking part in development of displaying Celery task execution results and statuses on an asynchronous manner and test the Orchestrator against a dedicated Azure account together with a DevOps engineer.</p> <p>Tools and technologies used:</p> <p>Dev OS: Arch Linux, Ubuntu Server amd64 (VM: QEMU-KVM) Test OS: Ubuntu Server amd64 (VM: Xen) Python 2, Python Standard Library, Flask, Flask Blueprints, Jinja2, Virtualenv Werkzeug, Nginx Redis, SQLite GNU Make, Terraform, curl, Vim Git, Bitbucket, JIRA</p>

May 2018 – Aug 2018	<p>bTrade secureXchange app (bTrade TDXchange)</p> <p>Project description: Development of the server-based solution (TDXchange) for secure managed file transfer (MFT) between two or more participants (endpoints) using a wide variety of network protocols and incorporating symmetric and asymmetric encryption methods. It is written in Java and incorporates the JSF web application framework and the RichFaces library with some excerpts from the OmniFaces library. It stores all its internal configuration parameters in one of the following RDBMSes, depending on initial configuration and build profile: Oracle Database, MS SQL Server, H2 Database.</p> <p><i>(The customer of the project is bTrade LLC)</i></p> <p>Personal role in the project: Configuring and building application bundles for a series of supported platforms: Linux x86/x64, Solaris SPARC, IBM AIX 32/64-bit, HP-UX IA-64. Deploying and testing application bundles on remote servers having and running the aforementioned platforms. Performing bug fixing operations and documenting various configuration caveats and gotchas found during deployment of new versions or custom builds of the application and its components.</p> <p>Tools and technologies used:</p> <p>Dev OS: Ubuntu Server amd64 (VM: Xen) Server OS: Red Hat Enterprise Linux x86-64, SUSE Linux Enterprise Server x86-64, Solaris SPARC V9, IBM AIX for PowerPC 32-bit and 64-bit, HP-UX (IA-64) Java EE, Java Class Library, JSTL, JSF, RichFaces, XML, XHTML, JavaScript, Bash Shell Script WildFly (JBoss) Application Server Oracle Database, H2 Database Apache Maven, curl, Vim Subversion, bTrade's internal bug tracking system</p>
Nov 2017 – Apr 2018	<p>Mercer Enhance: Machine Learning for Job Matching</p> <p>Project description: Development of REST API microservices in Python running inside Docker containers which are communicate each other through the REST model. They are built on top of business layer that is responsible for deep learning of a series of data models, and returning sets of incumbents (predictions and accuracy) for job matching user infrastructure.</p> <p><i>(The customer of the project is Mercer LLC)</i></p> <p>Personal role in the project: Building and configuring microservices using the Docker Compose tool, testing their work and performance using various Python web app frameworks and servers (see below). Doing prototyping work for experimental development approaches using asynchronous web communication scheme (Python) and porting a couple of microservices into Go (golang) in order to increase their performance. Preparing microservices for pre-deployment stage for Amazon AWS computation environment. Documenting the source code and architectural techniques/approaches which were implemented in various prototyping branches.</p> <p>Tools and technologies used:</p> <p>Dev OS: Ubuntu Server amd64 (VM: QEMU-KVM / Xen) Server OS: Ubuntu Cloud amd64 VM Docker containers based on Ubuntu and CentOS images Python 2/3, Python Standard Library, Twisted Web, Klein, Falcon, Virtualenv Gunicorn (Python/WSGI), uWSGI (Python/WSGI), Twisted Reactor app servers TensorFlow Serving (machine learning library), Go, Go Standard Library, JSON GNU Make, Docker Compose, curl, Vim Git, Bitbucket, JIRA</p>

Jul 2017 – Aug 2017, Development work at R-Style Lab, LLC, Minsk (2 months)	
Job position: Software Developer of the IoT Development Division	
Jul 2017 – Aug 2017	<p>Splink Desktop</p> <p>Project description: Development of the Windows system service to make a continuous screen video capturing and recording it as a sequence of video files, and later on to transmit them to a remote private server.</p> <p>Personal role in the project: Research and development activities on selecting an appropriate third-party framework or library, suitable for fast screen video capturing. Also development of the video files rotating mechanism.</p> <p>Tools and technologies used:</p> <p>Dev OS: Microsoft Windows 7 x64, Arch Linux x86-64 Test OS: Microsoft Windows 7 x64 ISO C++, Windows API (GDI), FFmpeg Visual Studio Professional 2017, Vim, GNU Make, TDM-GCC: tdm64-1 (g++) Git, GitLab, Redmine</p>
Mar 2017 – May 2017, Development work at Invatechs Software, LLC, Minsk (3 months)	
Job position: Software Developer of the Web Development Division	
Mar 2017 – May 2017	<p>Upmargin</p> <p>Project URL: dev.upmargin.com</p> <p>Project description: Development of control panel (CP) components for the web application which is targeted onto the Hotel Booking Services area. The key aspect of this web app is the deep integration with the Google AdWords web service.</p> <p><i>(The customer of the project is Upmargin Ltd.)</i></p> <p>Personal role in the project: Development of new web pages or their components according to the project guidelines and requirements. Minor bug fixing in a series of web pages of the CP. Building and testing the CP. (Development work covers both frontend and backend layers, which talk to each other by utilizing REST API techniques, and both written in JavaScript.)</p> <p>Tools and technologies used:</p> <p>Dev OS: OpenBSD/amd64, Ubuntu Server amd64 (both: VM: QEMU-KVM) Server OS: Ubuntu Server amd64 (Cloud VM) JavaScript, MEAN stack (MongoDB, Express, AngularJS, Node.js), HTML, CSS Nginx Vim Git, Bitbucket, Trello</p>
Feb 2016 – Sep 2016, Development work at Devicepros, LLC, Minsk (8 months)	
Job position: Software Developer of the Software Development Division	
Aug 2016 – Sep 2016	<p>Test Infrastructure (TI): Virtual Linux block device driver for collecting and measuring I/O latency</p> <p>Project description: The backend web service as a TI component (see prev. project) operates on DUT (device under test) devices. For character devices there is already such a driver in use, but for block devices there isn't. The project's aim is to develop a block device driver as a loadable kernel module (LKM) for the Linux kernel that will perform collecting and measuring latency for I/O operations.</p> <p><i>(The customer of the TI project is Stellus Technologies, formerly a division of Samsung Electronics.)</i></p>

	<p>Personal role in the project: Responsible for the whole project – development of the Linux block device driver and a small utility to test (and debug) its work without any invocations from the TI backend web service. Documenting the source code.</p> <p>Tools and technologies used:</p> <p>Dev OS: Arch Linux x86-64 Test OS: Ubuntu Server amd64 (VM: QEMU-KVM) ISO C, Linux kernel API, GNU C Library (glibc) Vim, Doxygen GNU Make, Flexible I/O Tester (fio) Git, GitHub, JIRA</p>
May 2016 – Jul 2016	<p>Test Infrastructure (TI): REST Backend Service</p> <p>Project description: The backend web service for TI that communicates with the frontend web service through the use of REST API calls. The Test Infrastructure consists of two big components: frontend and backend. Whilst the frontend is responsible for communicating with the QA specialists and written in PHP and JavaScript, the backend is doing its work (run single tests or multi-test jobs on DUT (device under test) devices) behind the scenes; it is written mainly in Python with some performance-critical parts written in Go and C. Both frontend and backend components talk to each other by utilizing REST API techniques.</p> <p><i>(The customer of the TI project is Stellus Technologies, formerly a division of Samsung Electronics.)</i></p> <p>Personal role in the project: Responsible for development of the report generating facility (agent), which is intended to collect information about all tests and test jobs are being ran or currently running on DUT devices, and to produce consolidated PDF or CSV report for QAs and managers. Other activities include general bug fixing in other parts of the project and documenting the source code.</p> <p>Tools and technologies used:</p> <p>Dev OS: Arch Linux x86-64 Server OS: Ubuntu Server amd64 Python 3, Python Standard Library, Django REST framework, ReportLab PDF Toolkit, Virtualenv Python/WSGI (uWSGI) application server MySQL, PostgreSQL Vim, Doxygen Git, GitHub, JIRA</p>
Feb 2016 – Apr 2016	<p>Test Infrastructure (TI): Simulating Samsung AWS</p> <p>Project description: Building the simulating AWS (Amazon Web Services) environment to develop and test new features for TI locally, instead of using remote Samsung AWS environment.</p> <p>(Test Infrastructure is the composite software platform aimed at using by developers and QAs to run either single tests or multi-test jobs on DUT (device under test) devices, for example, on SSD drives. It utilizes host/target paradigm to perform its tasks on multiple machines at once.)</p> <p><i>(The customer of the TI project is Stellus Technologies, formerly a division of Samsung Electronics.)</i></p> <p>Personal role in the project: Development of the local build and test environment, vaguely reminiscent of AWS environment used during the Samsung storage software development process by various dev/QA teams. Responsible for creating modules and scripts for cascade execution of build sequences written in a series of programming languages: Perl, Bash Shell Script, Java, Python, Go. Documenting.</p>

	Tools and technologies used: Dev OS: Arch Linux x86-64 Server OS: Ubuntu Server amd64 Perl 5, Bash Shell Script Java SE, Java Class Library Python 3, Go (along with their respective standard libraries) Apache HTTP Server Jenkins (continuous integration service) Docker (software containers infrastructure) Koding (cloud-based dev env + VM) Vim GNU Make, Apache Maven Git, Bitbucket, JIRA
Jan 2013 – Apr 2015, Development work at SMS Online, LLC (Gomel branch), Gomel (2 years, 4 months)	
Job position: Senior Software Developer of the Software Development Department (Dev Dept)	
<p>All the projects given below should not be considered as separate projects, but in contrary they are functional parts of a consolidated continuous development, improvement, and maintenance cycle of modules of the aggregated and unified bulk-billing SMS/IVR platform. This platform has been invented and developed exclusively by the SMS Online company for its internal ops., and currently it covers up to 90-95% of load for all the resources of the company with the comparable (approx. 1:1) throughput.</p> <p>Key technologies throughout the projects: Perl 5, PostgreSQL, and occasionally Java EE, ISO C, Asterisk.</p>	
Jan 2015 – Apr 2015	IVR Services: Optimization and Maintenance <p>Project description: Optimization and maintenance of the company's IVR Services, analysis of the IVR statistics and its periodical recalculation according to the requirements of currently running business processes. <i>IVR Services are interactive voice response services (something like voice menus) which are running on the dedicated server under the control of the open source Asterisk VoIP PBX. They work either in an isolated environment or in a part-to-part intercommunication with the other IVR Services ran by partners and VoIP telecom systems of mobile network operators, and with abonents.</i></p> <p>Personal role in the project: IVR statistics monitoring and analysis, and its periodical recalculation. Modernization of a series of auxiliary IVR services which let main services to work properly in a completely autonomous mode, without changing their source code in situations when IVR contexts are subject to switch. Modernization of web control panels which provide necessary functionality for configuring IVR services and to collect and retrieval of IVR statistics. Taking part in the IVR platform migrating from a hardware server to a cloud-based virtual machine together with the system and network administrators of the company. Carrying out post-migrating activities and tasks, including Cron jobs setup, Asterisk VoIP PBX configuring, IVR traffic and statistics analysis, and deep functional testing of all active IVR services running on the platform. Partially performing tasks as a DBA. Documenting.</p> <p>Tools and technologies used: Dev OS: Arch Linux i686; OpenBSD/amd64 Server OS: Debian GNU/Linux amd64 (HW x 2 / Cloud VM) Perl 5, LWP, DBI, CGI, Asterisk::AGI, YAML::XS, Log::Log4perl, etc. YAML, SQL Asterisk VoIP PBX, Apache HTTP Server, Nginx PostgreSQL Vim GNU Make Git, GitLab, MediaWiki, Redmine </p>

Nov 2014 – Dec 2014	<p>Partner Services (Mobile Subscriptions)</p> <p>Project description: Making and providing the so-called lending pages to partners to store company's content on their side (as web services), and processing SMS billing ops. according to requirements and conditions of active partner programs.</p> <p>Personal role in the project: Automating the process of creating the WAR archive for a web app (containing a lending) for its future use during one of endorsed partner programs. Installing, deploying, and testing this WAR archive on supported Java EE app servers.</p> <p>Tools and technologies used:</p> <p>Dev OS: Arch Linux i686 Server OS: Debian GNU/Linux amd64 (Cloud VM) Java EE, Java Class Library, Servlet / JSP API Apache Tomcat, JBoss Application Server Vim GNU Make, Apache Maven Git (including Git submodules), GitLab, Redmine</p>
Jul 2014 – Oct 2014	<p>Gate Admin CP II (SMS Billing Control Panel: Next Gen)</p> <p>Project description: Continuous deepest modernization of the SMS Billing Platform Control Panel (CP). The CP is the web administrative console that is built as a series of separate modules written using CGI and Mojolicious MVC-framework. The CP is used mostly by the company's tech support group 24x7. <i>SMS Billing is the multi-component composite software platform for processing billing ops. with SMS message queues which are moving between partners' services and mobile network operators.</i></p> <p>Personal role in the project: Participating in the CP migrating process from separate CP modules to a single unified Mojolicious-based app combining all the managerial stuff in one web app. General bug fixing in various obsolescent but still active CP modules. (Presentation and business layers.)</p> <p>Tools and technologies used:</p> <p>Dev OS: Arch Linux x86-64 Server OS: Debian GNU/Linux amd64 (Cloud VM) Perl 5, Mojolicious, Text::Xslate, DBI, CGI, MIME::Lite, YAML::XS, Log::Log4perl, etc. YAML, HTML5, CSS, JavaScript, SQL Morbo / Hypnotoad, Apache HTTP Server, Nginx PostgreSQL, SQLite Vim GNU Make Git, GitLab, Redmine</p>
Mar 2014 – Jun 2014	<p>Partner Services (Spb Transport / Spb Subway)</p> <p>Project description: Composite mobile commerce (MC) project consisting of two independent subprojects:</p> <ol style="list-style-type: none"> 1. The MC system to communicate to the St.Petersburg Public Transport Portal for getting information about public transport traffic, timings, stations, etc., and to transmit this information to passengers' PDAs and mobile phones upon SMS requests. Main system components: (1) SMS billing gateway, (2) Daemon for incoming SMS messages; it also processes GTFS data. 2. The MC system to communicate to the Russian Standard Bank and to the St.Petersburg Subway Service for activating and recharging the Podorozhnik transport prepaid cards used inside St.Petersburg subway stations, from passengers' PDAs and mobile phones via SMS transactions and IVR interaction. Main system components: (1) SMS billing gateway, (2) IVR platform, (3) Embedded HTTP server with the high-speed request handling mechanism that is running on partner's side.

	<p>Personal role in the project:</p> <ol style="list-style-type: none"> 1. Development of the daemon for incoming SMS messages that is also responsible for processing GTFS data (GTFS-realtime feed). To develop this daemon the company's internal Perl-based framework was used. It is tailored especially for constructing such daemons which are considered to be real-time ready. Also during the development of this daemon the third-party GTFS Realtime API was used. 2. Development of the IVR service using the third-party Google Text-To-Speech API which is running inside IVR platform under the control of Asterisk VoIP PBX. It operates as follows: as the input data it receives a prepaid card number, as the output data it says a secret code to activate the card (Perl). Also during this project I was responsible for development of the embedded HTTP server with the high-speed request handling mechanism. It was intended to run on partner's side (ISO C, GNU libmicrohttpd). <p>Tools and technologies used:</p> <p>Dev OS: Arch Linux x86-64 Server OS: Debian GNU/Linux amd64 (VM) Perl 5, LWP, DBI, AnyEvent, Redis, Asterisk::AGI, Archive::Zip, Text::CSV, YAML::XS, JSON::XS, Log::Log4perl, etc. ISO C, GNU C Library (glibc), GNU libmicrohttpd YAML, JSON, GTFS Realtime API, Google Text-To-Speech API Twiggy, Redis, Asterisk VoIP PBX Vim GNU Make, GCC, TCC Git, GitLab, Redmine</p>
Dec 2013 – Feb 2014	<p>Bulk Admin CP (SMS Bulk Control Panel)</p> <p>Project description: Further development and improvement of the SMS Bulk Platform Control Panel (CP). The CP is the web administrative console utilizing Vaadin Framework controls and workflow. The CP is used mostly by the company's tech support group 24x7. <i>SMS Bulk is the software platform for mass messaging.</i></p> <p>Personal role in the project: Responsible for the whole project (as the only Java developer in almost exclusively Perl-oriented company). Development of the additional user controls according to new business requirements and general bug fixing. (Presentation layer.)</p> <p>Tools and technologies used:</p> <p>Dev OS: Arch Linux i686 Server OS: Debian GNU/Linux amd64 (VM) Java EE, Vaadin Framework, JDBC, XML, SQL Apache Tomcat PostgreSQL Vim Apache Ant Git, Redmine</p>
Mar 2013 – Nov 2013	<p>Gate Admin CP (SMS Billing Control Panel)</p> <p>Project description: Further development and improvement of the SMS Billing Platform Control Panel (CP). The CP is the web administrative console that is built as a series of separate modules written using CGI and Mojolicious MVC-framework. The CP is used mostly by the company's tech support group 24x7. <i>SMS Billing is the multi-component composite software platform for processing billing ops. with SMS message queues which are moving between partners' services and mobile network operators.</i></p>

	<p>Personal role in the project: Development of a bunch of new CP modules including the following: "Preprocess Messages Search", "MT-Subscriptions and Services Management", "Users and Roles Management". Taking part in the CP migrating from a hardware FreeBSD-based server to a virtual machine running Debian Stable together with the system and network administrators of the company. General bug fixing in various CP modules. Documenting. (Presentation and business layers. Role-based user authorization-expert.)</p> <p>Tools and technologies used:</p> <p>Dev OS: Arch Linux i686 Server OS: FreeBSD/amd64 (HW); Debian GNU/Linux amd64 (VM) Perl 5, Mojolicious, Text::Xslate, DBI, MIME::Lite, YAML::XS, Log::Log4perl, etc. YAML, HTML5, CSS, JavaScript, SQL Morbo / Hypnotoad, Apache HTTP Server PostgreSQL Vim GNU Make Git, MediaWiki, Redmine</p>
Jan 2013 – Feb 2013	<p>Java Bulk Client (SMS Bulk Platform API for Java Client)</p> <p>Project description: Development of the SMS Bulk Platform API easily accessible from within Java clients (used by business partners). <i>SMS Bulk is the software platform for mass messaging.</i></p> <p>Personal role in the project: Responsible for the whole project (as the only Java developer in almost exclusively Perl-oriented company). Development of the API library with the complete Javadoc and installation/use notes. Also development of the test/sample web app to demonstrate how to use the library inside a client Java web app.</p> <p>Tools and technologies used:</p> <p>Dev OS: Arch Linux i686 Server OS: FreeBSD/amd64 Java EE, Java Class Library, Servlet / JSP API, JSTL, SLF4J XML, XHTML, CSS, JavaScript Apache Tomcat Vim Apache Maven Git, Redmine</p>
Aug 2012 – Oct 2012, Development work at Intervale, CJSC (Gomel branch), Gomel (3 months)	
Job position: Senior Software Developer of the Mobile Banking Solutions Development Department	
Aug 2012 – Oct 2012	<p>Sberbank of Russia Uniform Mobile Banking Payment System</p> <p>Project description: Development of the complex composite payment system for mobile banking (MB) that targets its area of application to cover all divisions and subsidiaries of Sberbank of Russia with the uniform MB system. This system provides bank clients with the ability to make payments using their various mobile devices (cellular phones with the Java ME technology inside, smartphones, and tablets based on Symbian, Android, and iOS operating systems). This system is developed consolidatedly by a series of companies, one of them is the Intervale company. It is responsible for R&D for building the following components: SMS gateway, message queues, and client apps for Java ME-based mobile phones.</p> <p>Personal role in the project: Responsible for development of the web administrative console intended to use by bank operators and auditors to control and manage the assets and processes which are underlie the SMS gateway and message queues-related operations. Documenting. (Presentation and (partially) business layers. Usability and accessibility-expert. User authentication and authorization-expert.)</p>

	Tools and technologies used: Dev OS: Arch Linux x86-64 Server OS: Microsoft Windows Server 2008 x86-64 Java EE, Java Class Library, Servlet / JSP API, JSTL, SLF4J Spring Web MVC + Spring Security, Apache Struts 2 (initially) XML, XHTML, CSS, JavaScript, jQuery Apache Tomcat, IBM WebSphere Application Server Vim Apache Maven Subversion, Samba
Jan 2012 – May 2012, Development work at XIMAD, Inc. (Gomel branch), Gomel (5 months) <i>XIMAD, Inc. and XIM, Inc. have joint headquarters</i>	
Job position: Senior Software Developer of the Wireless Division	
Mar 2012 – May 2012	Ad Optimizer, XIMAD, Inc. Project URL: devopt.ximad.com Project description: Literally this can be stated as an advertising optimizer. This is a web app that is used by company's managers to reorder and redistribute the ad banners and applets which are displayed on abonents' mobile devices. The items of such ad content (ad banners and applets) are only displayed on those mobile client applications and games which were produced and offered by the company and – that is very important – are free of charge to download and use, in other words, which are freeware or at least shareware. These ads are subject to apply the following operations which might be performed over them inside this web app: filter, connect, delete, make active, discard, and reorder using the following criteria: mobile platforms (mobile operating systems) and their versions, mobile apps and games and their versions, and localization parameters, abonents'/mobile devices' geographic location (using the GeoLocation third-party web service API). Personal role in the project: Development of new web pages according to the project guidelines and requirements. Bug fixing in most actively used web pages of the app. Building, testing, and deploying the whole app in a production environment along with making any required database schema changes. Documenting. (Presentation and business layers.) Tools and technologies used: Dev OS: Ubuntu amd64 (Window Maker; generic kernel flavor) Server OS: FreeBSD/amd64 Java EE, Play! Framework, JDBC, JavaMail, XML, XHTML, CSS, JavaScript, SQL Apache Tomcat Eclipse SDK, vi Apache Maven MySQL Subversion, Redmine
Jan 2012 – Feb 2012	Zuma iOS/Zuminja (2D-game for Apple iPhone/iPad/iPod touch), XIMAD, Inc. Project description: Development of the 2D-game Zuma iOS (alternate name Zuminja) intended to run on the Apple mobile devices line-up. (The mobile app should look and behave similar to already developed ports for Android- and BlackBerry-based devices.) Personal role in the project: Responsible for the whole project except making game design scenes and related static graphical components.

	<p>Tools and technologies used:</p> <p><i>Preparation stage:</i> Dev OS: CentOS x86_64 (Window Maker); Ubuntu amd64 (Window Maker)</p> <p>Objective-C 2.0 GNUstep/Cocoa API, XML GNUstep object-oriented development kit, vi</p> <p><i>Active stage:</i> Dev OS: Mac OS X Lion (installed on a Mac mini workstation) Objective-C 2.0 OpenGL ES, XML Apple Xcode IDE (along with additional tools and iOS Simulator), MacPorts, vi Redmine</p>
Sep 2010 – Dec 2011, Development work at XIM, Inc. (Gomel branch), Gomel (1 year, 4 months) <i>XIM, Inc. and XIMAD, Inc. have joint headquarters</i>	
Job position: Senior Software Developer of the Web Development Department	
Jul 2011 – Dec 2011	<p>Mobility Traffic Mediation Solution (Media Optimizer and Web Optimizer), Openwave Systems Inc. (off-site)</p> <p>Project description: Integrated complex project that targets the development of the NGP (Next Generation Proxy) proxy server. This server together with its plugins Media Optimizer and Web Optimizer is designed as a mediation layer to reduce traffic loads which highly affect the network infrastructures of Internet service providers and mobile network operators when they operate on and transmit dense mobile traffic to the users' and abonents' mobile devices.</p> <p>Personal role in the project: General bug fixing activities in the mainline branch of the Media Optimizer (Java) and Web Optimizer (C++) plugins according to official bug reports issued by the QA team. Mainly, having responsibilities on bug fixing, rebuilding, deploying in a test env., and testing the crucial component of the Media Optimizer plugin called ViDeO (Video Delivery Optimizer). Documenting.</p> <p>Tools and technologies used: Dev OS: FreeBSD/amd64 (KDE); Ubuntu amd64 (Window Maker; generic kernel flavor) Server OS: CentOS x86_64; Red Hat Enterprise Linux Server x86_64 Java SE / EE, ISO C++, Bash Shell Script, Perl 5, XML Apache HTTP Server, Apache Tomcat Vim MySQL Perforce, Openwave's internal Issue Tracking System (ITS) + Trac</p>
Sep 2010 – Jun 2011	<p>Atlas Information Governance Suite (Policy Atlas), PSS Systems, an IBM Company (off-site)</p> <p>Project description: Policy Atlas is the web-based management information system that unifies Legal, IT, Records Management, Finance and Lines of Business to eliminate unnecessary discovery and data management risk and cost. The Suite includes enterprise workflow, decision support tools and a unified inventory of assets and their legal obligations and business value. Atlas enables company to meet its duties for legal information governance and to identify and eliminate data with no business value or legal obligation.</p> <p>Personal role in the project: Java modules coding, JavaScript modules coding, Bash scripts coding. The main task is to develop and maintain complex, interactively overloaded web-page "Matter Exceptions and Alerts". Bugfixing in other modules of the application. Also having responsibilities for development of the (auxiliary) patching utility intended to simplify and accelerate Policy Atlas application deployment.</p>

	Tools and technologies used: Dev OS: Kubuntu i386 (server kernel flavor) Java EE, Java Servlet, JSP, JSTL, JSF, JDBC, XML, XHTML, CSS, SQL JavaScript, Bash Shell Script JBoss Application Server, IBM WebSphere Application Server Oracle JDeveloper MyEclipse Blue Edition Oracle Database Perforce, Trac
Mar 2009 – Aug 2010, Development work at the Dubna Technopark, Dubna, including development work at the FE Brickbuild (Belarusian branch of Dubna Technopark), Gomel (1 year, 5 months)	
Job position: Senior Software Developer of the Expert Systems Development Centre	
Mar 2009 – Aug 2010	Intellectual automated control system (IACS) "Trainflow", Dubna Technopark Project description: IACS "Trainflow" is the centralized management information system having its purpose to control and maintain the real-time process of optimal timing and routing the freight trains inside both Russian and Belarusian railway systems with no any constraints. Personal role in the project: G2 and ASP.NET modules coding, JavaScript modules coding, creating, building and mastering the original design for the web part of the application and performing related tasks. Having responsibilities for part of the project belonging to development of the subsystem for dynamic generating the railway system interactive web reports (presentation layer); usability and accessibility-expert. Tools and technologies used: Gensym G2 Platform Gensym G2 Programming Language Gensym G2 Server and built-in HTTP Server Gensym G2 Telewindows JavaScript, jQuery Microsoft .NET Framework, ASP.NET, XML, XHTML, CSS, SQL Microsoft Visual Web Developer 2008 Express Edition Microsoft Visual Studio Team System 2008 Microsoft Internet Information Services Oracle Database Subversion
Sep 2003 – Sep 2008, Development work at the FE IBA-Gomel, Gomel (5 years)	
Job position: Senior Software Developer of the E-Business Division	
Jul 2008 – Sep 2008	Automated information system "KDT", IBA-Gomel Project description: AIS "KDT" is the management information system having its purpose to control and maintain the process of delivering the particular groups of commodities inside complex economical systems such as a trade system. Personal role in the project: Java modules coding and performing related tasks. Having responsibilities for part of the project belonging to development of the managing the user accounts portlet for large portal system (business and presentation layers).

	Tools and technologies used: Java EE Java Portlet, Java Servlet, JSP, JDBC, XML, XHTML, SQL, PUMA SPI IBM WebSphere Portal Server IBM WebSphere Application Server IBM Directory Server (LDAP) Apache Pluto Apache Tomcat IBM Rational Application Developer Checkstyle IBM DB2 Universal Database Concurrent Versions System, Trac
May 2008 – Jul 2008	IBM AS RM Metro, IBM Netherlands, IBM Germany (off-site) Project description: Web-based application that empowers managers with the ability and functionality to perform capacity planning and operational optimizations inside IBM. In other words, this is the tool to manage any and all resource changes. Personal role in the project: Java modules coding and performing related tasks. Having responsibilities for parts of the project belonging to front-end presentation layer, so called "user interaction". Tools and technologies used: Java EE Java Servlet, JSP, JDBC, JavaMail, XML, XHTML, SQL The Apache Struts Web Application Framework IBM WebSphere Application Server IBM Rational Software Architect Checkstyle IBM DB2 Universal Database Subversion, Trac
Feb 2008 – May 2008	Automated information system "KDT", IBA-Gomel Project description: AIS "KDT" is the management information system having its purpose to control and maintain the process of delivering the particular groups of commodities inside complex economical systems such as a trade system. Personal role in the project: Java modules coding and performing related tasks. Having responsibilities for part of the project belonging to the common graphical user interface design and development (presentation layer). Tools and technologies used: Java EE Eclipse SWT, JDBC, XML, SQL IBM WebSphere Application Server IBM Rational Application Developer Checkstyle IBM DB2 Universal Database Concurrent Versions System
May 2006 – Feb 2008	IBM Web Solutions Enabler (WSE), IBM Italy, IBM France (on-site/off-site) Project description: Web-based project that provides functions to allow the creation, maintenance and operation of a number of IBM Intranet and Internet solutions (WSE eSolutions) according to the end-users' and customers' needs through the "Application Modeling" and "Application Runtime" interfaces. The project is for IBM Italia S.p.A.

	<p>Personal role in the project: Java modules coding and performing related tasks. Having responsibilities for parts of the project belonging to application configure and runtime stages in preparing certain eSolutions (business and presentation layers).</p> <p>Tools and technologies used:</p> <p>Java EE Java Servlet, JSP, JDBC, JavaMail, iText, XML, XHTML, SQL The Apache Struts Web Application Framework IBM WebSphere Application Server IBM Rational Application Developer Checkstyle IBM DB2 Universal Database Concurrent Versions System</p>
Jul 2004 – May 2006	<p>GME Engineering Business Systems Sustain (EBSS), General Motors Europe, IBM Germany (on-site/off-site)</p> <p>Project description: Provides enterprise business maintenance and sustain for a bunch of applications with the purposes to manage and control business processes of production infrastructure on various GME vehicle plants, in particular, on Adam Opel AG plants. The project is for General Motors Europe.</p> <p>Personal role in the project: Java modules coding, modifying existing third-party code, general application bug-fixing and performing related tasks; performing standard operations (password reset, user account management, etc.) in the 24x7 schedule. Having responsibilities for maintenance and support of the HMCS Global (Hazardous Material Control System) and INFO2000 applications and for performing standard operations in the 24x7 schedule for these two and for three other related applications through the GME Help Desk.</p> <p>Tools and technologies used:</p> <p>Sun Java 2 Platform Standard Edition (J2SE) Sun Java 2 Platform Enterprise Edition (J2EE) Java Swing, Java Servlet, JDBC, XML, XHTML, SQL Apache HTTP Server Apache JServ Apache Ant Eclipse Platform IBM VisualAge for Java Oracle Database Concurrent Versions System</p>
Feb 2004 – Jul 2004	<p>IBM Web Solutions Enabler (WSE), IBM Italy, IBM France (on-site/off-site)</p> <p>Project description: Web-based project that provides functions to allow the creation, maintenance and operation of a number of IBM Intranet and Internet solutions (WSE eSolutions) according to the end-users' and customers' needs through the "Application Modeling" interface. The project is for IBM Italia S.p.A.</p> <p>Personal role in the project: Java modules coding and performing related tasks. Having responsibilities for part of the project belonging to the application configure stage in preparing certain eSolutions (business and presentation layers).</p> <p>Tools and technologies used:</p> <p>Sun Java 2 Platform Enterprise Edition (J2EE) Java Servlet, JSP, JDBC, XML, XHTML, SQL The Apache Struts Web Application Framework IBM WebSphere Application Server IBM WebSphere Studio Application Developer IBM DB2 Universal Database Concurrent Versions System</p>

Nov 2003 – Feb 2004	<p>IBA Business Intelligence System (BIS), IBA-Gomel</p> <p>Project description: Web-based project that allows customers to analyze the intellectual resources of a company, to place orders for software coders with skills needed and to hire new workers.</p> <p>Personal role in the project: Business-logic modeling, Java modules coding and performing related tasks. Having responsibilities for part of the project concerning internal management processes, i.e. managing customers and orders lists, accepting and rejecting customers' profiles processes (business and presentation layers).</p> <p>Tools and technologies used:</p> <p>Sun Java 2 Platform Enterprise Edition (J2EE) Java Servlet, JSP, JDBC, XML, XHTML, SQL The Apache Struts Web Application Framework IBM WebSphere Application Server IBM WebSphere Studio Application Developer IBM DB2 Universal Database Concurrent Versions System</p>
Sep 2003 – Nov 2003	<p>IBA Database Manager, IBA-Gomel</p> <p>Project description: Java AWT and C++ Win32 API GUI front-ends for managing some databases. Advantages: fast adding, viewing and removing records to/from database tables through JDBC/ODBC interfaces.</p> <p>Personal role in the project: Java and C++ modules coding, database tables creating and modifying. Having responsibilities for the whole project.</p> <p>Tools and technologies used:</p> <p>Sun Java 2 Platform Standard Edition (J2SE) Java Abstract Window Toolkit (AWT), JDBC, ODBC, SQL GNU Make IBM Jikes Compiler GNU Compiler Collection (GCC) IBM DB2 Universal Database</p>
Sep 1999 – Jul 2003, Research work at the Pavel Sukhoi Gomel State Technical University, Gomel, including research work at the Abdus Salam International Centre for Theoretical Physics, Trieste, Italy (4 years)	
Job position: Research Assistant of the Department of Economics and Management	
Nov 2002 – Jul 2003	<p>Linear and Nonlinear Optimization Toolkit for Study Courses in Operations Research</p> <p>Project description: Three packages for seeking optimal solutions: dense linear programming (revised simplex method), quadratic programming (using algorithm by Schittkowski), general nonlinear programming (nonlinearly constrained minimization).</p> <p>Personal role in the project: Test problems formulating, mathematical programming algorithms exploring and C packages coding. Having responsibilities for the whole project.</p> <p>Tools and technologies used:</p> <p>GNU Make GNU Compiler Collection (GCC)</p>

Dec 1999 – Nov 2002	Nonlinear Optimization Packages for Scientific Work Project description: <ul style="list-style-type: none"> ● Java numerical implementation of the Hooke and Jeeves nonlinear optimization algorithm. ● C++ numerical implementation of the Nelder-Mead simplex method. ● Java numerical implementation of the Quasi-Newton nonlinear optimization technique. Personal role in the project: Test problems formulating, mathematical programming algorithms exploring and Java/C++ packages coding. Having responsibilities for the whole project. Tools and technologies used: Sun Java 2 Platform Standard Edition (J2SE) GNU Make IBM Jikes Compiler GNU Compiler Collection (GCC)
Sep 1999 – Dec 1999	Scientific Data Conversion and Visualizing Utilities Project description: <ul style="list-style-type: none"> ● The template program for using applied scientific software calculations in AutoCAD system for visualizing numerical data. ● The utility program for converting applied scientific software output to AutoCAD DXF format. Personal role in the project: Developing appropriate algorithms; C and C++ packages coding. Having responsibilities for the whole project. Tools and technologies used: GNU Make GNU Compiler Collection (GCC) AutoCAD Development System Runtime Extension (ADSRX)

Personal information	
Date of birth	June 27, 1977 (42yo)
Citizenship	Republic of Belarus
Marital status	Single
No. of children	2
Driver's license	No
